

FENCE GUIDELINES

- Submit plat of survey marking the fence location with permit application.
- The following materials are considered non-suitable for fence construction: chicken wire, square weld mesh wire, barbed wire, temporary snow fence, sold concrete block, and sharp-edged material along the top or sides of fence.
- Electric fences prohibited.
- Any fence that has different sides shall be constructed so the attractive side faces away from the property on which the fence is constructed.
- No fence is allowed in the area between the front of the house and the street. Front yards cannot be fenced in.
- For fences on corner lots contact building department to determine if side yard is allowed to be fenced.
- Fence must be located on Owner's property and a minimum 3" from the owner's property line.
- Maximum height for fence is 6'.
- Maximum span for solid paneled fence is 8'.
- Post holes for 6' tall fence must be 42" deep.
- Post holes to be filled with concrete.
- Post hole diameters are as follows:
 - 4x4 Wood posts = 6 inches
 - 6x6 wood posts = 12 inches
 - 5x5 vinyl = 8 inches
 - 6x6 vinyl = 10-12 inches**The width should allow for a 2- to 3-inch layer of concrete all the way around the post for rock-solid stability
- Post hole inspections required call the Building Department 24hrs in advance to schedule.
